

FOOD WEB TABLE

Choose a California ecosystem. What plants and animals live there? As you find images and information about them, what adaptations do you notice? List them in the table below.

Next, use this table to draw a food web to show how the plants and animals are connected to each other, based on what they eat and what eats them.

Name of animal or plant	What does it eat or where does it get energy from?	What eats it?	Adaptation to help it eat or to not be eaten
